TITLE INDEX

Analysis of a multi-echelon production-inventory system with random supply, 275
Analysis of heuristic trim-loss algorithms, an, 71
Application of multicriterional analysis to the ranking and evaluation of the investment programmes in the ready mixed concrete industry, 367
Biased selection of the inventory reorder point when demand parameters are statistically estimated, 283
Capacity analysis of two-stage production lines with any products, 175
Capital costs and a point-in-point out inventory investment under uncertainty, 229
Commonality and safety stocks, 197
Comparison of the discrete and continuous-time stochastic selling models, 15
Corporatewide information requirements analysis and financial, marketing and production planning, 343
Decision support system for long range manufacturing resource planning, a, 159
Decomposition principles applied to the dynamic production and work-force scheduling problem, 39
Designing an information system for the perishable tools inventory: a hybrid approach, 357
Development of systems for the control of production and materials in a corporation organized into profit centers, on the, 123
Dilemmas of innovation management, 307
Dimensioning of bus driver buffers subject to variations in the traffic load, 29
Econometric analysis of inventory investment and the role of short-term expectations, 293
Economic evaluation and analysis of flexible manufacturing systems, 79
Economies of computerized maintenance management systems, 335
Evolving the manufacturing strategy, 243
Feasible admission to the optimization of exploitation of tree stems, the, 21
Firm's investment policy under a concave adjustment cost function, the, 57
Framework for productivity analysis at the organisational level: method and an applied case, a, 401
Improvement curve analysis of changeovers in JIT environments, 259
Information systems for assemble-to-order production, 187
Innovative programs for the long-term survival of the American hospital industry, 327
Inorga scheduling systems, 137
Just-in-time from a business logistics perspective: a preliminary study of the effects on external transportations, 117
KB/DSS for financial planning, a, 219
Learning and production costs: an application of a cost prediction model to a fighter airframe programme, 389
Measuring the efficiency of service operations: an application to bank branches, 237
Multivariate utility function approach to stochastic capacity planning, a, 3
Operation plan optimization of porcelain production, 51
Optimal dynamic portfolio selection and firm behaviour under personal taxation, 211
Planning of production under environmental constraints, 299
Pricing – a strategic decision, 375
Production control in a consumer electronics factory, 165
Production innovation management and economies of scope: beyond the "Technological Fix", 315
Production-economic aspects on setup efficiency, 99
Profit center to strategy management – a contemporary management approach for implanting strategies, from, 267
Proposed research into a method for assessing and modelling design productivity in the electronics industries, 383
Robot's economic repeatibility, 93
Sensitivity of economic objectives in strategic dynamic power systems, 251
Sequential investment planning based on stochastic models, 205
Similarities between lot sizing and clustering, on, 65
Surplus or disposal quantities in optimal program planning in joint production, 143
Tool sharing in FMS – a feasibility study, 107
Utilization of microcomputers in production and inventory control, 131
